About

ContextCon 03: IIT Bombay, the Agentic Services Hackathon

Crustdata (YC F24) is hosting ***ContextCon 03: IIT Bombay, the Agentic Services Hackathon***, with ***Techfest, IIT Bombay***, and in partnership with ***Y Combinator***, on Saturday, October 31.

Services, Replaced.

Services as software, powered by agent-native data infrastructure.

Services are at a turning point. For twenty years, software helped recruiters, analysts and diligence firms do their jobs. Now it's starting to do the jobs itself.

Companies spend far more on services than on software. Recruiting firms, auditors, insurance brokers and freight forwarders are paid for an outcome, not a tool, and agents can now deliver it. The latest models finish a full day's work on their own, act through email, calls and payments, and look up who someone is and what a company does in one canonical graph.

Building a service is different from building a tool. Parts delivered rather than suppliers listed. Invoices paid rather than invoices read. Fraud caught rather than flagged. Offers signed rather than candidates sourced.

If you're an exceptional builder, this is your challenge: pick a job people do today, in-house or at a firm, from hiring to underwriting to freight, and build the agents that do all of it. Bring in a human only for the exceptions, make every decision cite its reasons, and do it all in five hours.

You'll:

- Ship a working agent that does a real job people are paid for today
- Get access to Crustdata's canonical identity graph for people and company data, with Crustdata's engineers on the floor
- Show it in a demo video: your product taking a request it has never seen all the way to finished work

Prizes include:

- 1-on-1 office hours with Jon Xu, Partner at Y Combinator, for the top three teams
- Crustdata credits: $8,000 for first place, $3,000 for second and $1,000 for third
- Pre-placement interviews at Crustdata for standout builders from any team

Lunch is on us, and every builder walks out with cool swags.

Judges: Yashwant Akash and Rishabh Raj from Crustdata, and Professors from IIT Bombay.

What You'll Build

Agents that turn a whole service into software. Think:

- A recruiter that takes a role and returns an accepted offer
- A procurement desk that turns a vague purchase request into a supplier an auditor would sign off on
- An underwriter that checks every submission against the world, then quotes, refers or declines
- A scout that finds exceptional founders before they raise, and says why each one deserves a meeting
- A fraud investigator that takes an insider tip and returns a complaint-ready case file
- Or what these agents run on: memory that lasts for months, a check on every action before it goes out, agents that pay their own way

The shape is yours: a single agent, a system of agents, an MCP server or a CLI. These are just ideas to get you started. The stage is yours to explore.

Who Should Apply

- Third- and fourth-year BTech and dual-degree students, and MTech students, at IIT Bombay
- Builders who have shipped something real

How to Apply

Tell us:

- Something you've shipped
- What you want to build at ContextCon
- Who's on your team, if you're applying as one

Participation is free and selective. Accepted builders will receive confirmation and event details.

Hackathon schedule

Saturday, October 31, 2026 (IST)

- 9:00 AM: Doors open and badge collection
- 9:30 AM: Kickoff and theme briefing
- 10:00 AM: Crustdata API walkthrough and team formation
- 10:30 AM: Building begins
- 12:30 PM: Lunchtime lightning talks
- 1:30 PM: Optional mentor checkpoint
- 3:00 PM: Last call, thirty minutes to code freeze
- 3:30 PM: Code freeze, with demo videos and repos due
- 3:45 PM: Video review
- 5:00 PM: Finalists announced
- 5:30 PM: Finals, live on stage
- 7:30 PM: Winners announced, and the closing party

FAQ

Do I need a team to apply?

No! Come solo, or bring up to three teammates for a team of four. Arrive alone and want company? Team formation is at 10:00 AM, and that's where you'll find your people.

What should I prepare before the day?

As much planning as you like. Pick the job you want to replace, learn how the people who do it today actually work, sketch your design and set up your accounts and tools. The code itself starts when building begins at 10:30 AM.

What should I bring?

Your laptop, your charger and your college ID. Lunch is on us, and you'll walk out with swag.

What is Crustdata, and why would my agent need it?

Crustdata is the canonical identity graph for people and company data: who someone is, where they've worked, what a company does and how it's changing, resolved to one record for each. Almost every service runs on that knowledge. A recruiter has to know the candidate, and an underwriter has to know the business. With Crustdata, your agent can look it up live instead of guessing.

Do I have to build with Crustdata?

No, it's your choice. Build with any model, framework or tool, with or without Crustdata. Every project is judged on the same criteria either way.

What does every builder get from Crustdata?

Your own Crustdata API key with $1,500 in credits. A team of four starts the day with $6,000 in credits between them.

When and how do I get my Crustdata API key?

At check-in, from 9:00 AM, along with your badge. At 10:00 AM, Crustdata's engineers walk everyone through the API, so you're ready to go when building begins at 10:30 AM.

What can my agent do with a Crustdata API key?

Find people by role, employer, skills or location, and pull anyone's full career history. Find companies by industry, size, growth or funding, and see their headcount, funding and leadership over time. Search job postings, search and fetch the live web, and set up watchers that tell your agent the moment a person or company changes.

How does my agent connect to Crustdata?

Two ways. Call the API directly, or add Crustdata's MCP server at install.crustdata.com/mcp to Claude Code, Codex or any other MCP client, and your agent picks the right call for each step on its own. Everything is documented at docs.crustdata.com, with a guide for agents at docs.crustdata.com/for-agents/mcp.

How long do the Crustdata credits last?

They're for building during the hackathon, so spend them freely on the day.

What if I hit a rate limit or run low on credits?

A 429 response just means slow down: wait a few seconds and retry. The /account/credits endpoint shows how many credits you have left, and if you're running low, grab a Crustdata engineer on the floor.
